

## ADDITIONAL INFORMATION PRESS RELEASE

### **Quote Dr. Thomas Reisinger, Chief Operations Officer Infineon Technologies Austria**

"We are very proud to have reached a groundbreaking milestone with the development of the technology for the industrial production of the world's first 300mm power gallium nitride wafers. Our Villach team has contributed significantly to the success of the Group in the field of power semiconductors, which is a key lever for decarbonization and digitalization. In recent years, major investments have been made in Villach as the global competence center for power electronics in the further development of gallium nitride and silicon carbide. With this world first, we have once again proven that innovation is in our DNA. We are constantly expanding our expertise and driving forward our innovation leadership as part of a global team."
