增加节能家电将意味着节省更多的能源消耗

如果用英飞凌半导体产品
实现世界上所有冰箱的变频化，节省的能源相当于瑞典一年消耗的能源

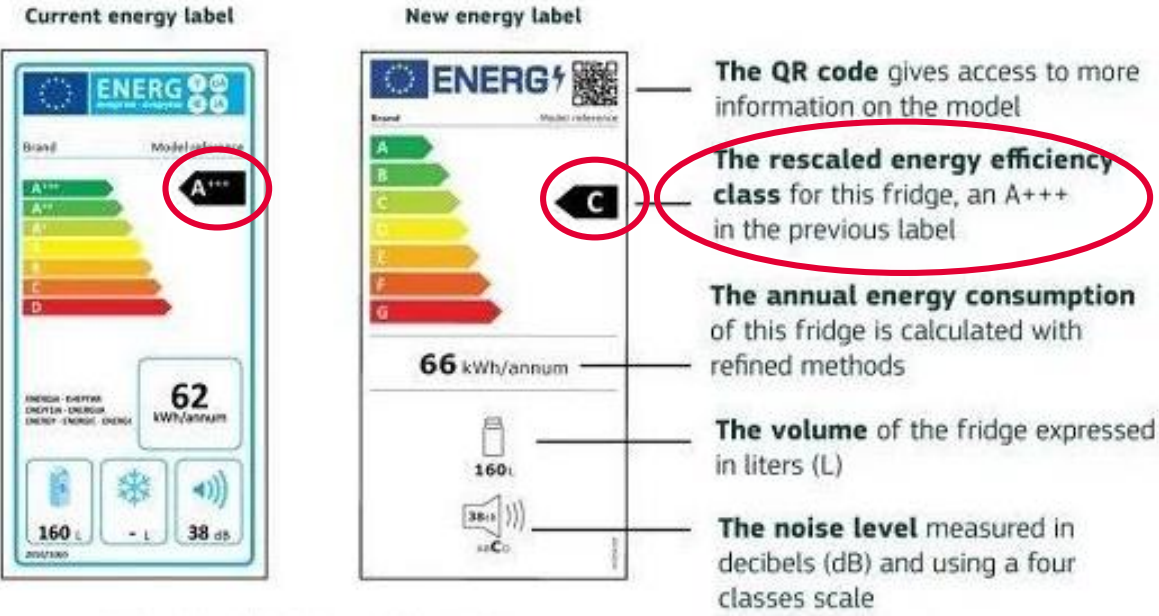

变频化将推动未来几年全球对功率半导体的需求

Source: Omdia, "Major Home Appliance Market Report", November 2020

能源效率法规推动了变频化

- › Energy efficiency regulations drive the use of inverters for motor control. (EN 60335-2-24:2010/A1:2019+A2:2019, implemented from March 1st, 2021)
- › Motor speed is automatically controlled on inverter models, smaller temperature variations contribute to energy efficiency

The energy labels for a fridge without freezer

冰箱应用的设计要求

- › Full power 250W (up to 300W)
- › Standby power < 0.5W
- › High pressure compressor startup
- › Complex system control logic:
 - State machine driven by power estimation
 - Error handler
- › Control interface: frequency input 30~150Hz
- › Rapid development cycle. (6 months Design-in/Design-win to production)
- › Lower system cost – single layer PCB, size reduction (PCB, DC bus cap)

iMOTION™ 2.0 产品组合

脚本引擎处理复杂的系统控制逻辑

> Power calculation and constant-power control

> Script sample code in application note:

```

001     DPwr = (IdFilt*Vd)>>12; //Q12
002     QPwr = (IqFilt*Vq)>>12; //Q12
003
004     TempVar = (PowerSc1 * (QPwr+DPwr))>>12;
005     //LPF Ts 1ms (2.5Hz -3db)
006     PwrMultiDEN= PwrMultiDEN + (TempVar - PwrRslt2);
007     PwrRslt = PwrMultiDEN >> 6;

```

> Customer's script code for power calculation:

```

/*****Power Derating and protection*****/
L_DPwr=(IdFilt*Vd)>>12; //Q12
L_QPwr=(IqFilt*Vq)>>12; //Q12
//Power calculation code with DC bus compensation enabled
L_TempVar1=(L_PwrSc1*(L_DPwr+L_QPwr))>>12;
L_Pwr_MultiplyDEN=L_Pwr_MultiplyDEN+(L_TempVar1-G_PwrRslt);
//Power calculation code with DC bus compensation disabled
//L_TempVar1=(L_DPwr+L_QPwr)*VdcFilt)>>11;
//L_TempVar2=(L_PowerSc1*L_TempVar1)>>12;
//L_Pwr_MultiplyDEN=L_Pwr_MultiplyDEN+(L_TempVar2-G_PwrRslt);
G_PwrRslt=L_Pwr_MultiplyDEN>>6;//lcount=0.01W

```

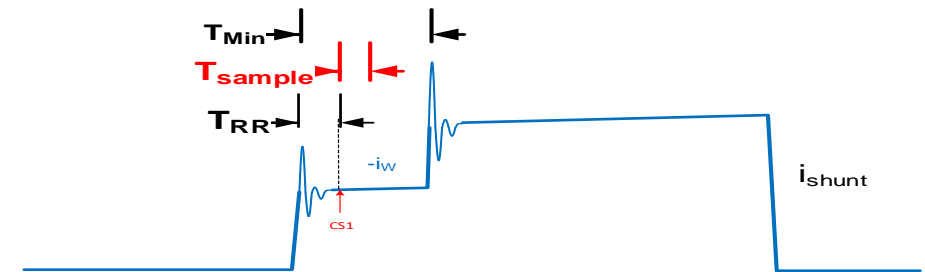

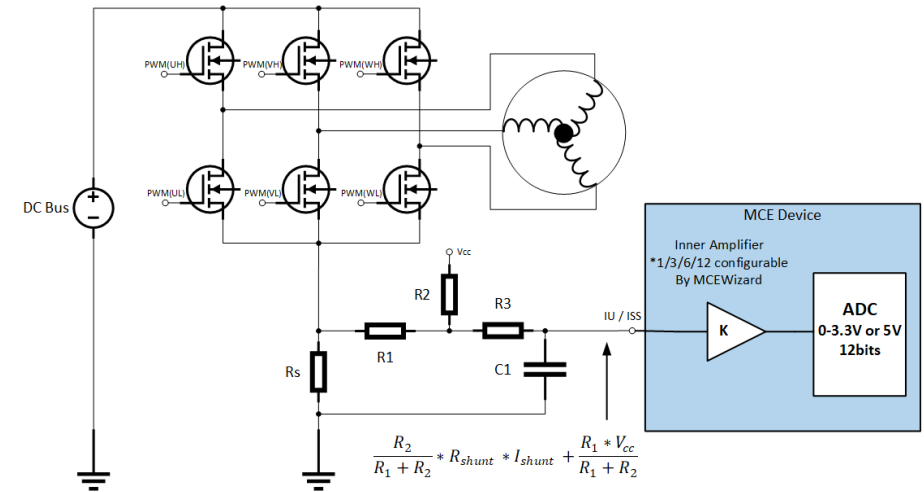

灵活的电机启动方法

- › Direct Start-up
- › **Park+Open-loop+Closed-loop: high pressure compressor startup**
- › Catch Spin Start-up
- › Angle Sensing Start-up

低成本的电机电流检测

- › IMD solution can provide lowest cost motor current sensing:
 - No additional external OP-Amp are required (Internal Gain can be set via MCEWizard: 1x, 3x, 6x, 12x).
 - Good current reconstruction with single shunt configuration.
 - Phase shift SVPWM can guarantee the AD sampling quality.

冰箱参考设计板(双层 PCBA板)

- **REF_Fridge_D111T_CoolMOS SOT223**
 - IMD111T-6F040 + CoolMOS SOT223
- REF_Fridge_C101T_IM231
 - IMC101T-T038+IM231-L6S1B
- REF_Fridge_C101T_6ED_IGBT DPAK
 - IMC101T-T038+6EDL04I06PT+IGBT RCD2 DPAK
- Dimension: 78*78 mm
- Application: Fridge, Fans, Motor Drive etc.

REF_Fridge_D111T_CoolMOS SOT223 特点

- > iMOTION™ SmartDriver IMD111T-6F040
- > Ready-to-use motion controller with scripting engine and 6-channel SOI driver
- > 600V CoolMOS™ PFD7 – optimized technology with lowest Qrr, ESD protection and compact SOT223 SMD package
- > System solution enables best light load efficiency and compact design

单层冰箱参考设计板

满功率温升性能

> 250W 1.2A phase current

Back side

Front side

Thermal characterization case temperature – input power 250W, ta = 25°C

Board Type	Maximun case temperature(°C)
Two layers IMD reference design board	97
Single layer IMD referencedesign board	100.5

基于单层板解决方案的待机功率测量

> Customer's requirements for standby power: <0.5W

Input power of single-layer reference design board: **0.454W**

参考设计板的效率比较

› Compare the board efficiency between the IMD111T+IGBT with IMD111T+MOSFET solution based on the fridge compressor. (Based on 5kHz PWM frequency)

单面板PCBA案例

- > PCB information: 113mm*104mm, 2oz, FR-4
- > Control input: frequency control 30~150Hz (mapping to 1200~4200rpm)
 - Infineon components: IMD111T + IKN04N60RC2 *6
 - 2-layer of same size would cost 0.4USD more

IKN04N60RC2 * 6 pieces

IMD111T-6F040

单面 PCB 布板重要点1

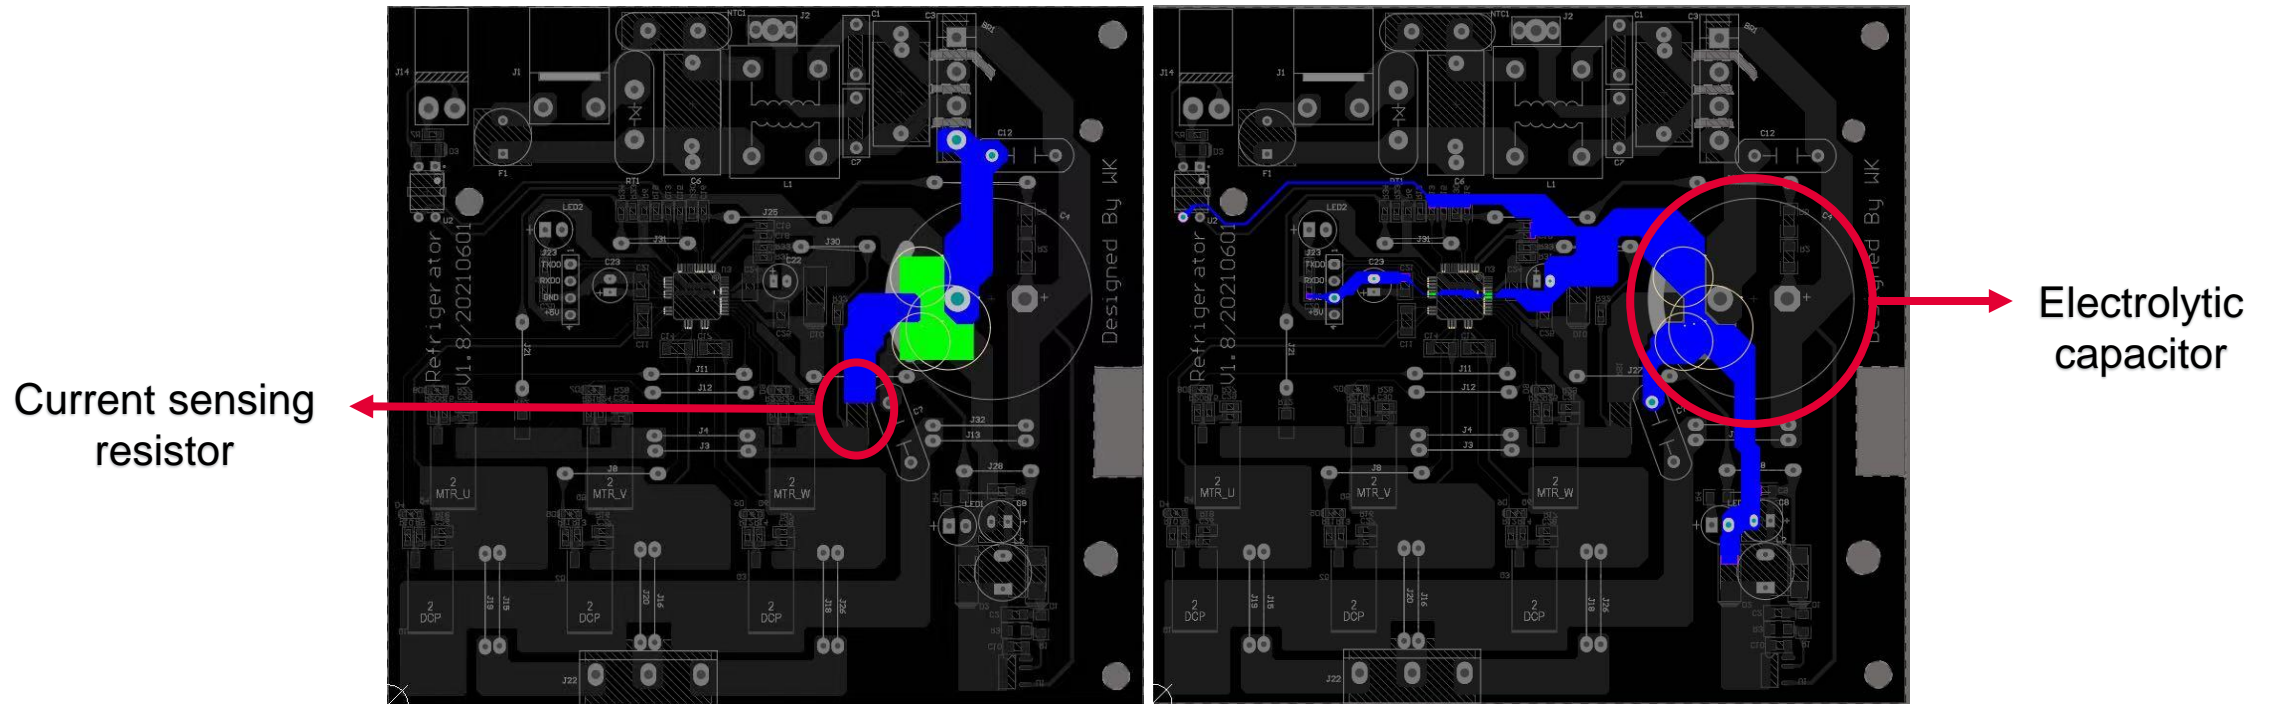

1. Additional dummy pads to increase the PCB heat sink capability.

Power devices ←

单面 PCB 布板重要点2

2. Power ground and digital ground are connected to the electrolytic capacitor at a single point. Avoid the jump wire for ground layout.

> Power ground

> Digital ground
