Refrigerator Compressor Control Solution

MCU

MPN	CY8C4146AZI-S423
Core	CM0+
Max Operation Frequency	48MHz
Pin account	48
Flash	64K
RAM	8K
GPIO	38
PWM	5ch TCPWM
Timer	5
Ext Interrupt	8
A/D	16CH(1)*12bit @1MSPS
DAC	Idac : 1*8bit
Comparator	2
Operation Amplifier	2
Serial Comm	5* SCB
DMA	Yes
Operation Voltage	1.75-5.5V
Package	TQFP48

Specifications and control characteristic

Technical Spec:

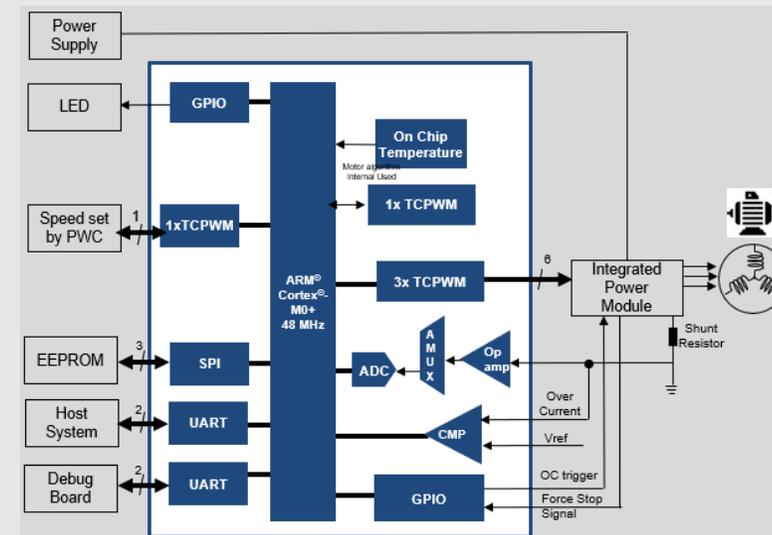

- Compressor carrier frequency: 4KHz-10KHz.
- Compressor motor speed: 1200rpm-4500rpm
- Max rise Speed: 5Hz/s (Mechanical rotation speed)
- Max reduction of speed: 3Hz/s(Mechanical rotation speed)
- Speed overshoot: 0.5Hz

Control Characteristic:

- Sensor-less motor control method based on FOC technology
- Optimized SVPWM with 4us
- 1-shunt sampling
- Directly close loop startup without open loop drag, no stop clamping, closed-loop smooth running at full speed
- Supporting the Field weakening function
- Full scale protection: over/under voltage, over current (phase current and AC input), motor running power real-time calculation and protection, IPM over temperature, sample hardware fault, phase loss, rotor lock
- Adopting the speed and current double closed loop PI control

Application block diagram

PSoC4100S Refrigerator Compressor Solution

BOM	MPN	QTY
MCU Controller	PSoC4100S (CY8C4146AZI-S423)	1
Discrete for Compressor	Pre-driver (6EDL04I06NT) MOS (IPN60R1K0PFD7 S x 6)	1
IPM for Compressor	IM231L6S1BALMA1	1

The solution can be discrete IC(pre-driver+MOS) or IPM .

HPFC+ Refrigerator Compressor Control Solution

MCU

MPN	CY8C4548AZI
Core	CM0+
Max Operation Frequency	48MHz
Pin account	48/64
Flash	256K
RAM	32K
GPIO	39/53
PWM	8ch TCPWM
Timer	8
Ext Interrupt	8
A/D	16CH(2)*12bit @1MSPS
DAC	Idac : 1*8bit
Comparator	2
Operation Amplifier	3
Serial Comm	5* SCB
MCA	Math Cal accelerator
DMA	3unit DMA
Operation Voltage	1.75-5.5V
Package	TQFP48/64

Specifications and control characteristic

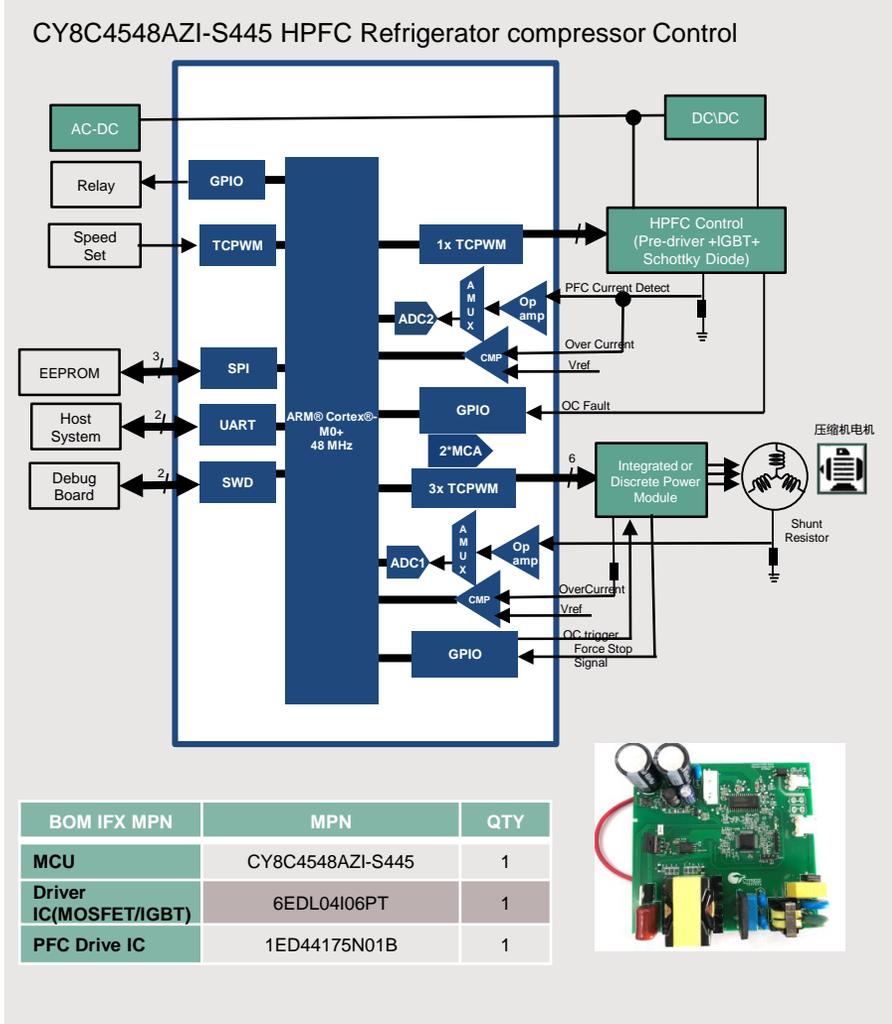

Technical Spec:

- Compressor carrier frequency: 5 KHZ.
- Motor efficiency: >94%
- PFC carrier frequency: 35~40KHz, PFC efficiency :95-99%
- Compressor motor speed: 1200rpm-4500rpm

Control Characteristic:

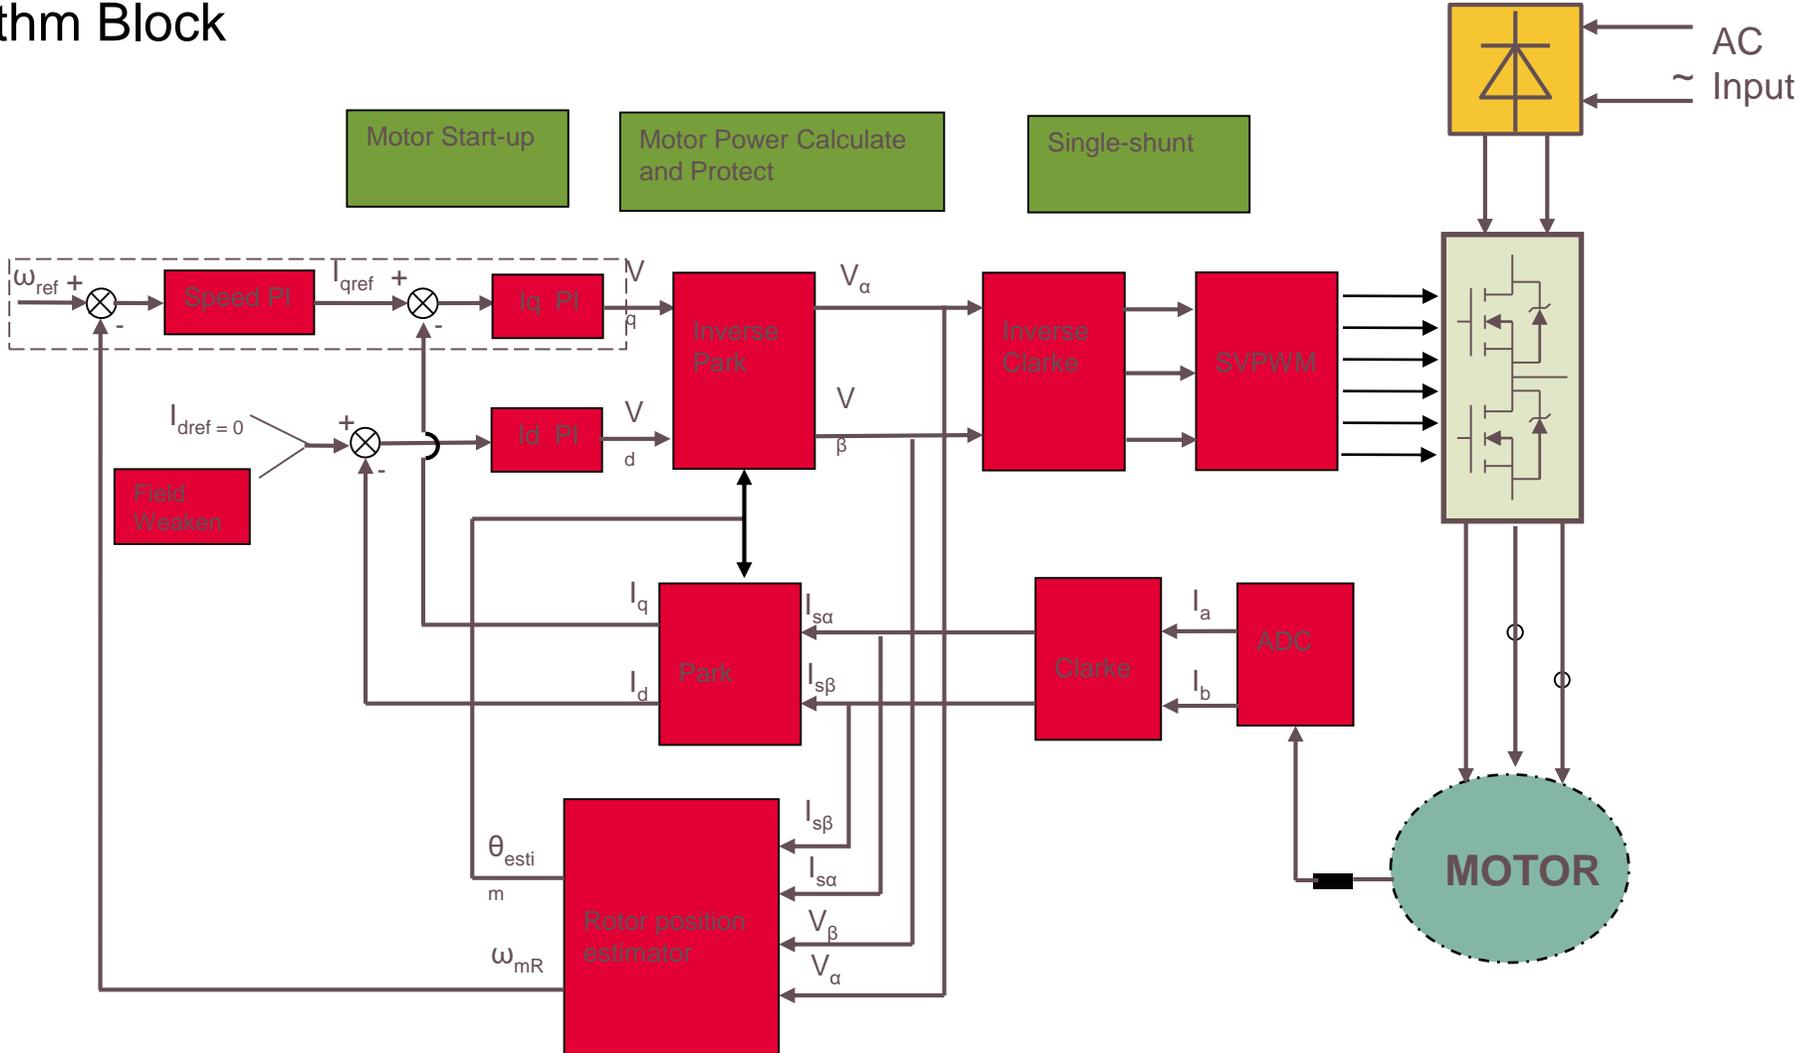

- Sensor-less motor control method based on FOC technology
- Optimized SVPWM with 4us
- 1-shunt sampling
- Directly close loop startup without open loop drag, no stop clamping, closed-loop smooth running at full speed
- Supporting the Field weakening function and dead-time compensation
- Full scale protection: over/under voltage, over current (phase current and AC input), motor running power real-time calculation and protection, IPM over temperature, sample hardware fault, phase loss, rotor lock
- Adopting the MCA accelerates execution time of the code

Application block diagram

Solution Overview

> FOC Algorithm Block

Solution overview

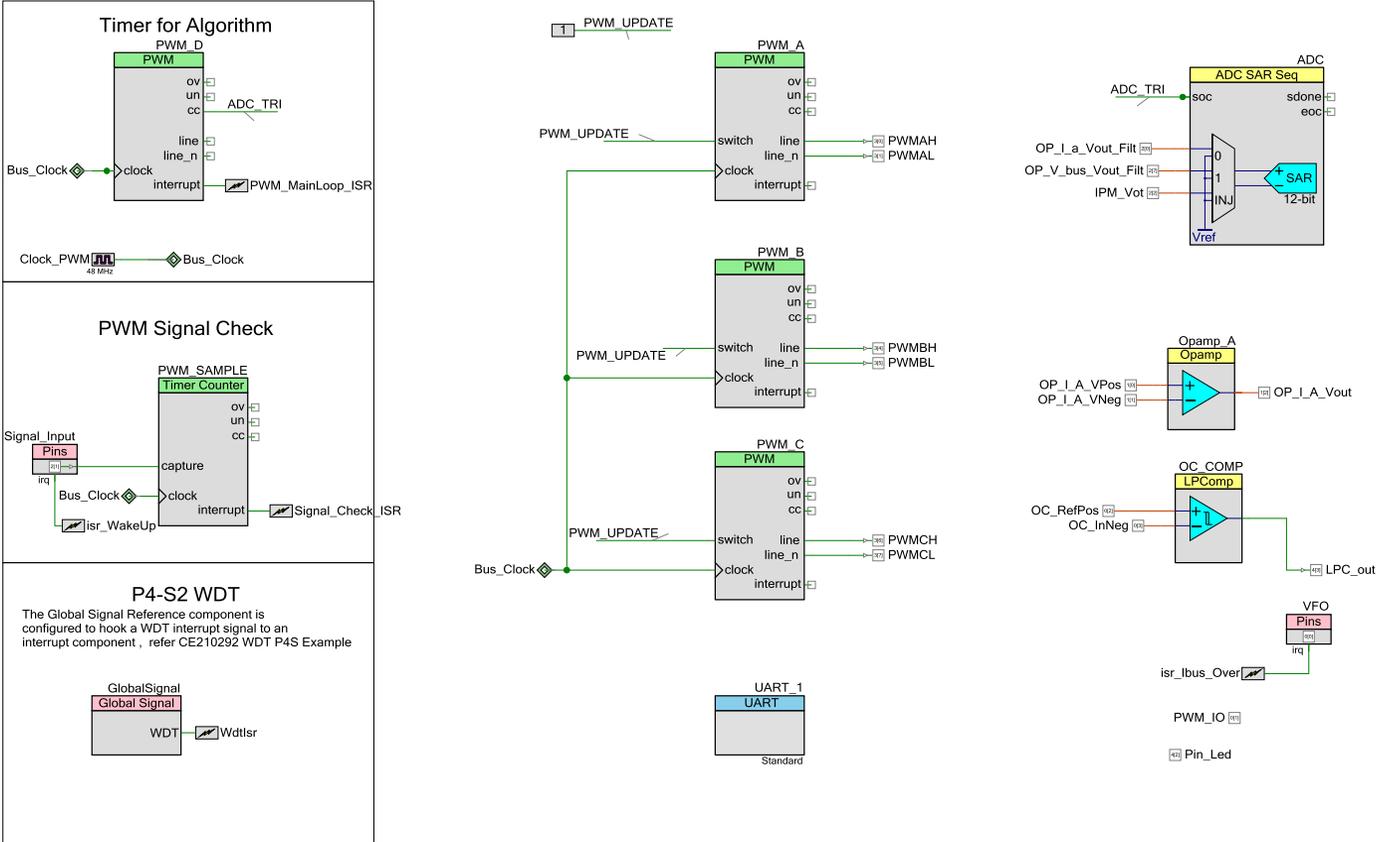

› Basic Algorithm List

- Field orientation control (FOC)
- Frame transform (Clarke, Park)
- PID regulator
- SVPWM generator
- Single shunt solution
- Math
- Filter
- Full-scale protection function

› Core Algorithm List

- PLL estimator
- Field weaken
- Self-adaption start-up
- Motor power calculation
